/Prabodh M Dharia/
Primary Examiner, Art Unit 2629

1. **Status:** Please all the replies and correspondence should be addressed to Examiner's new art unit 2629. Receipt is acknowledged of papers submitted on 03-18-2008 under request for continued examination with amendments and request for reconsideration, which have been placed of record in the file. Claims 1, 10-25, 40-45 and 54-63 are pending in this action. Claims 2-9, 26-39 and 46-53; are cancelled in this action.

Response to Amendment

2. The amendment filed 03-18-2008 does not introduce any new matter into the disclosure. The added material does have support in the original disclosure. Applicant has amended claims 1, 10, 17, 40, 54; and cancelled claims 2-9, 26-39, and 46-53; after extensive discussion with examiner during telephone interview and after extensive searched by examiner, adding allowable limitations to expedite allowance of instant application.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 02-22-2008 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

4. Applicant has amended claim 1, 10, 17, 40, 54; and has cancelled claims 2-9, 26-39, and 46-53, adding allowable limitations discussed with examiner during interview not only to overcome prior art of Koyoma et al. (US 6,911,926) but also to expedite allowance of instant application. Applicant arguments filed on 01-18-2008, under remark regarding allowable

limitations “each step select unit including n serially connected analog switches polarized to match a logic state of each bit of the n-bit digital data signal; wherein one end of each of said step select units is connected to the reference voltage line and the other end of each of said step select units is connected to a column line input to an effective pixel area; wherein the analog switches comprise P-channel MOS transistors and N-channel MOS transistors; and wherein the n-bit digital data signal has a low amplitude equal to a reference voltage minimum less a threshold value of a P-channel MOS transistor and a high amplitude equal to a reference voltage maximum plus a threshold of an N-channel MOS transistor” are persuasive; as after further extensive search and consideration, amended independent claim 1, 10, 17, 40, 54 do overcome the prior art rejection mailed on 12-20-2007; which puts application number 10734300 in condition for allowance.

Response to Arguments

5. Applicant's arguments, see remark, filed 03-18-2008, with respect to double patenting rejection have been fully considered and are persuasive. The double patenting rejection of final office action mailed on 12-20-2007 has been withdrawn.

Allowable Subject Matter

6. Claims 1, 10-25, 40-45 and 54-63 are allowed.
7. The following is an examiner's statement of reasons for allowance:

Applicant has amended independent Claims 1, 10, 17, 40, 54, adding allowable limitations discussed during an interview with examiner to expedite allowance of the instant application. Applicant's arguments filed on 03-18-2008 are convincing. As argued by applicant in remarks under claim rejection page 11, paragraphs 2-8; prior art Koyoma et al. (US 6,911,926) and Butler (US 6,274,869 B1) of with all of the other prior art cited on 892's, 1449's, searched in NPL and searched in PGPUB, fails to recite or disclose all the other limitations of independent claims in combination with uniquely distinct features represented by underlined bold claim limitations recited below;

each step select unit including n serially connected analog switches polarized to match a logic state of each bit of the n-bit digital data signal; wherein one end of each of said step select units is connected to the reference voltage line and the other end of each of said step select units is connected to a column line input to an effective pixel area; wherein the analog switches comprise P-channel MOS transistors and N-channel MOS transistors; and wherein the n-bit digital data signal has a low amplitude equal to a reference voltage minimum less a threshold value of a P-channel MOS transistor and a high amplitude equal to a reference voltage maximum plus a threshold of an N-channel MOS transistor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
